WINGLIGHT PERGOLA

AN EXCLUSIVE PATCH OF SHADE

LARGE-SURFACE AWNING WITH INDIVIDUAL EXTRAS

THE WINGLIGHT PERGOLA AT A GLANCE:

- Provides shading for larger areas up to 72 m².
- Fabric awnings extend and retract individually to both sides, synchronously or asynchronously.
- Fabric awnings travel in guide rails, optionally with a ZIP system (ZipRail).
- Extensive LED lighting is another possible option.
- Option of motorised variovolant with 12V io remote-controlled motor and solar panel.

WINGLIGHT PERGOLA

DOUBLE-SHAFT SYSTEM, 2 MOTORS

Max. system width:	6000 mm
Max. projection per side:	7000 mm
Max. shaded area:	72 m²
Max. system height:	3250 mm

FLEXIBLE, FUNCTIONAL & FREE-STANDING

This free-standing, large-surface awning really makes an impact with an intelligent counterweight system for consistent fabric tensioning, optionally also with a ZIP system. The built-in rain channels in the guide rails and the integrated gutter in the drop profile allow for controlled water runoff. This means they can be safely used when it's raining, and guarantee a fully tensioned awning at all times.

LIGHTING THAT SETS A MOOD

The **WINGLIGHT PERGOLA** offers the option of extensive and versatile LED lighting, fully tailored to the user's requirements. All upright supports in each of the corners can be fitted with LED light strips. But LEDs can also be fitted to the spacer profiles, the guide rails and the optional inspection profile. The electrical connections and the necessary power supply units are located in the cavities of the two stable central aluminium upright supports (160 x 80 mm).

The **WINGLIGHT PERGOLA** creates a homey and relaxed feel, making it also ideal for restaurants and dining areas.

CONVENIENT CONTROLS

Tried-and-tested control at the touch of a button with the Somfy io remote-controlled motor offers convenience and reliability. A wide range of other drive and control variants is available as options, to cater to individual preferences.

The central upright supports are installed using flange plates as standard, although ground sleeves are available as an alternative. There is also the option of securing the system with a wall bracket on one side.

The external upright supports on the projecting side are also fixed with flange plates. The use of sleek aluminium cover plates ensures an attractive look. An innovative enhancement is offered by the optional use of "vertical support feet that can be covered" (MK-415) or "height-adjustable vertical support feet" (MK-416) for fixing the external uprights.
